Easymeal

food & beverage
and pos system

by **Scrigno**
hotel management
applications suite

Easy meal Objectives

A complete solution designed to assist the operation of all Food & Beverage departments, Restaurants, Bars, Fast-Food Outlets, as well as Discos and all sales points in general. Integrated to Electronic Wallet and Service Card systems.

Easy meal

Easy meal is the modular and scalable Management System for Food & Beverage departments, based on the advanced Oracle environment for simple and effective customization to meet all necessary requirements:

FROM RESTAURANTS TO BARS

FROM FAST-FOOD OUTLETS TO WINE BARS

FROM DISCOS TO BOUTIQUES

TO ANY COMMERCIAL STORE (POS)

This solution is appreciated for its ease of use, complete set of operations, quick service.

With its **Touch Screen** technology, **Easy meal** provides a practical, scalable and intuitive front end Graphic User Interface, for easier operation by the till agent.

Wireless Palmtop devices can be used to send real-time information to the various production department and ensure timely operation and responsiveness.

Easy meal with Rf-Id Technology (Radio Frequency Identification)

Easy meal is integrated with:

Rf-Id-based Electronic Wallet Systems (Radio Frequency Identification)

Easy meal allows you to control accesses and the delivery of services included in the package agreed with the customer, as well as to monitor the activities for statistical analysis. It can be adapted to the most complex of tourist villages and resorts with multiple point of sales and shops distributed over large areas, and **provides for payment processing via Palmtop devices.**

Rf-Id based Service Card (Radio Frequency Identification)

Can support loyalty building policies by collecting information on the activities of the customer, their usage, their perception of the services offered and their delivery, within a **Customer Relationship Management** framework. It can allow you to translate customer behaviour into advantages for future stays (such as rewards, or money to spend, or free access to other privileged services).

Integrated solution

Based on Oracle DBMS technology, **Easy meal** is the engine that can consolidate the data from a number of areas, and can be fully integrated with other components of the Scrigno suite, including:

- Hotel++ Management System
- Supply Department Management System
- Management Control System
- Accounting
- Electronic Wallet System
- Service Card System

Advantages for Company Management

In addition, **Easy meal** is valuable also for its advanced back-office functions and business intelligence capabilities: with a multi-level, query-based reporting system the System can meet effectively all informational and operational needs identified by the Management.

Modular and fully integrated

The product is fully modular and can be adapted to the requirement of every individual point of sale. It is divided in:

- Front end
- Back office

Capabilities

Easy meal_Front End provides the following functions:

- Order management. Optionally, the orders can be issued in the various production departments
- Management of servings and comments to the orders
- If required, the orders can be managed at greater levels of detail, based on the various production centres
- Main bills can be split into several partial bills
